

Mouse Premixed Methylation Calibration Standards

Product Highlights

- ▶ Premixed levels of Mouse High and Low methylation control DNA can be used to quantify the methylation levels of unknown samples or to validate quantitative methylation assays
- ▶ Ideal for use as controls in bisulfite methylation analysis procedures including Pyrosequencing, NGS, and MS-HRM

Product Contents

- ▶ 1 vial 0% Mouse Methylated Genomic DNA (1 µg at 50 ng/µL)
- ▶ 1 vial 5% Mouse Methylated Genomic DNA (1 µg at 50 ng/µL)
- ▶ 1 vial 10% Mouse Methylated Genomic DNA (1 µg at 50 ng/µL)
- ▶ 1 vial 25% Mouse Methylated Genomic DNA (1 µg at 50 ng/µL)
- ▶ 1 vial 50% Mouse Methylated Genomic DNA (1 µg at 50 ng/µL)
- ▶ 1 vial 75% Mouse Methylated Genomic DNA (1 µg at 50 ng/µL)
- ▶ 1 vial 100% Mouse Methylated Genomic DNA (1 µg at 50 ng/µL)

Ordering Information

CATALOG NUMBER	PRODUCT	PRICE
80-8060M-PREMIX	Mouse Premixed Calibration Standard (1 µg per vial, 20 µL volume)	\$359.96

Technical Specifications

- ▶ 5µg DNA in TE buffer (10mM Tris-HCl, 1mM EDTA, pH 8.0)
- ▶ Store at -20°C, in aliquots, for 2 years. For best results, do not freeze/thaw an individual aliquot more than three times. For longer term storage -70°C is recommended.
- ▶ Requires bisulfite conversion prior to use.

Example Quality Control Results

Figure: High Resolution Melt (HRM) Analysis Results

Premixed Control DNA is used to calibrate the HRM analysis assay, which measures the percent methylation of a bisulfite-converted DNA amplicon.

(Left) Example HRM Melting Curve. The amount of DNA that has melted into single-stranded molecules is measured by the fluorescence of the sample after it is mixed with a DNA-intercalating dye. When a double-stranded DNA molecule melts into single-stranded DNA molecules, the dye loses its fluorescence.

(Right) Example HRM Standard Curve. The fluorescence at a certain temperature can be used to differentiate between different levels of methylation. Lower levels of methylation correspond to greater numbers of cytosine to uracil conversions due to bisulfite treatment and, consequently, lower melting temperatures.
